## ATRACS Roll Call / Muster Reporting

Tracking and location of personnel within an industrial environment, especially in an emergency situation, is a vital health and safety requirement for process and industrial site managers.

**ATRACS** Web puts roll call information where it is required - directly onto the building managers desktop. By simply using the web browser supplied with every PC, managers with the required level of password clearance can instantly produce a roll call of all personnel on site or produce a list, in the event of an incident, of those mustered or missing and locate members of staff using their last logged transaction.

**ATRACS** Roll Call and Muster runs on a client's existing network (LAN or WAN). When integrated with the full **ATRACS** system it can link one or more sites into one efficient and fully integrated staff information system.

The full **ATRACS** package provides a single platform for access control, attendance recording, visitor management, alarm monitoring and photo-ID card production. Each module can be used separately or in any combination to create a tailored package to meet individual requirements.

**ATRACS** reduces administration and infrastructure costs, offering industrial, commercial and public sector organisations a comprehensive range of security features.

### Features:

- Administration effort reduced
- Up-to-date management information
- Electronic distribution of reports
- Web based query management
- Personnel information is password protected
- Runs under Microsoft NT/2000 Server with Microsoft Internet Information Server and Microsoft SQL Server database

### System Requirements

- Microsoft Windows NT4/2000 Server
- Microsoft SQL DBMS & Internet Information Server
- Browsers supported Netscape version 4 & above or Internet Explorer versions 4 & above

## Data Confidentiality and Security

All data is password protected with individual passwords. Before data can be accessed via the Web, the user must first be identified by entering their unique user ID and password.

## Management Information and Control

ATRACS Web provides managers with ready access to up to the minute attendance information allowing for the efficient locating of personnel.

Managers and supervisors can, at a click via their own desktop PC:

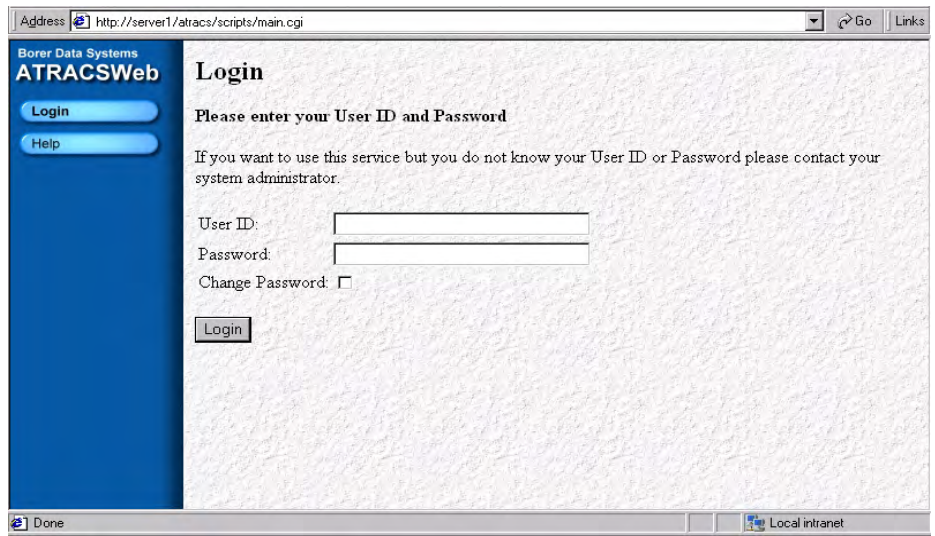

- List those on site
- List those in a specified building or facility
- Produce a muster or missing persons report listing those at an assemble point and those not accounted for

## Reduced paperwork

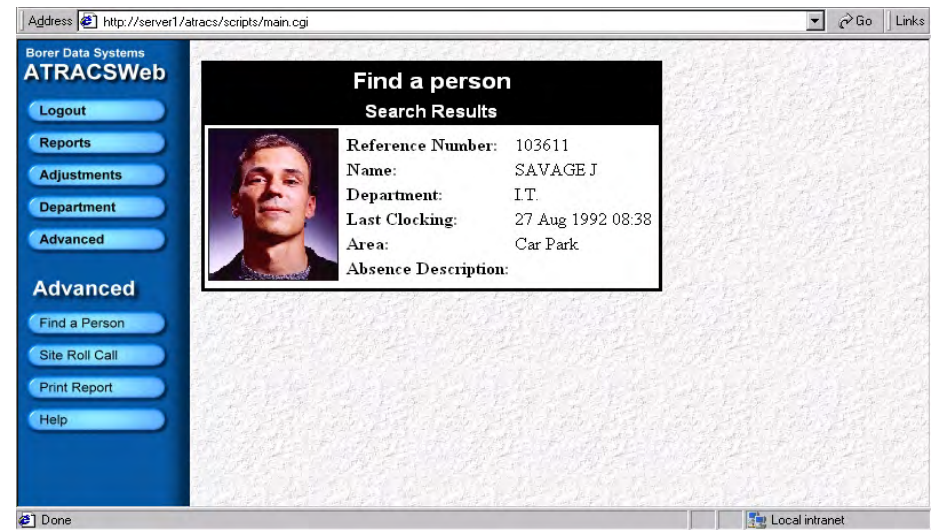

Reports are electronically distributed, improving information flow and eliminating paper.

## Savings

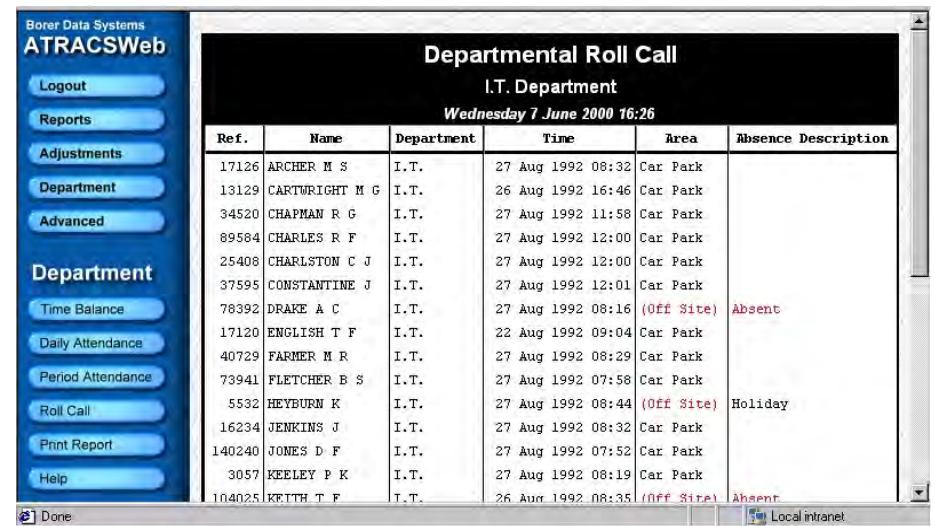

On workstation licences; large numbers of user licences are not needed for this Web based application.
